

Interview with Andrea Rossi from the March 2023

An excerpt from the interview, with the important informations!

Johannes Maringer/ÖVR-Serviceteam

What is the E-Cat Sklep SSM and how is it useful for people?

A.R.: The E-Cat is a highly efficient electricity generator. SSM stand for self-sustaining mode, where the E-Cat sustains its power generation with some excess power it creates. Because the E-Cat uses the zero-point energy as its source, it is outside the realms of the classic principles of thermodynamics.

What is the connection of what Nikola Tesla was doing and your work?

A.R.: Tesla theorized about an energy that could not be harvested by conventional sources. I tried to explain it, to theorize it, and to obtain a practical application in a paper, that can be found on Research Gate.

For how long can the E-Cat be in self-sustaining mode?

A.R.: We suppose a theoretical work life of 100.000 hours for the E-Cat. This, however, is a supposition. We guarantee it to work for a minimum of three years. Once the E-Cat stops working, we will take it back and recycle it. Also, we are having a live stream that we are not planning to stop at any time.

What happens when you take the E-Cat back?

A.R.: We disassemble it completely and recycle all the raw materials and make treatments that, for obvious reasons, are confidential.

What are the materials used for the E-Cat?

A.R.: The body is made out of plastic. Inside is mainly electronic material and some rare earth.

For how long has this live stream been running so far?

A.R.: Approximately 6 months.

What can you tell us about the safety aspects of this brand-new technology?

A.R.: The E-Cat SSM has been certified by a third-party certification company. All the documents regarding safety can be found on our website. Furthermore, I want to mention, that the E-Cat does not emit radiation, nor does it damage the environment with CO2 or other kinds of pollution. It is perfectly silent as well because it doesn't contain moving parts.

This sounds like something everybody would want. How are you dealing with people wanting this product?

A.R.: In order to make this product available to the public, we need to have at least 1 million pre-orders for the product to be economically feasible. To make a pre-order is free of charge, only before shipping the payment will be wired.

How many pre-orders have been made so far?

A.R.: I prefer not to name an exact number but so far it is several hundreds of thousands.

What are you doing to reach the 1 million orders?

A.R.: Within our financial means we will keep pushing marketing. Spreading the word by mouth also is important. I really hope that the live stream of the E-Cat SSM will go viral.

What kind of interest have you received from companies with large number pre-orders?

A.R.: We have several big companies with whom we are in touch.

How can we, the people, help you to reach the 1 million pre-orders?

A.R.: Help making the stream go viral. Also, the word-of-mouth service is critical. It costs nothing to place a pre-order and once we reach our target, we will reach out to the potential customer and offer our service. As the money will be charged via PayPal, the customer can still get reimbursed after up to 2 months after the payment. Credit card payments and other charging services will also be available.

What is it like to be a pioneer in this field?

A.R.: I must make the best out of the life God has given me. 30 years ago I chose to go this path, and so far it has been a very hard and expensive endeavor but I think that it will be worth it in the end.

What are your plans for retirement?

A.R.: (chuckles) I will never retire.
